

**The link between gas and process**

Gases: a specific job. Applied in every branch of industry, in an endless number of applications. Sometimes as raw material, at other times to support your production. One type of gas for safety purposes another to improve quality. In short, gases can form an essential part of your operation, which must be handled with care. Total Gas Management can help you with this.

**Total Gas Management**

Total Gas management is a complete delivery concept for bulk and cylinder gases. With this concept Linde Gas Benelux can take over various tasks for you, such as on-site logistics, stock keeping and ordering. Total Gas management can most certainly reduce time and money, where large locations and infrastructure exist. There are ergonomic advantages by eliminating manhandling of cylinders. You will keep control as we supply extensive management reports on all aspects of your gas consumption.

**Experience and security**

Linde Gas Benelux has been supplying Total Gas Management for over 25 years to renowned international companies in the (petro) chemical, semiconductor and medical sectors. A specially trained team of people forms the heart of the Total Gas Management organisation, which ensures a competent and service oriented effort. Maintaining and securing an uninterrupted gas supply is guaranteed.

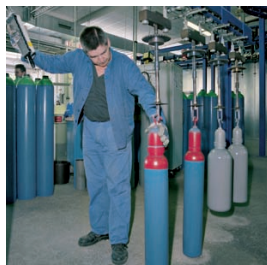

**Safety**

Safety is not only of importance during production and distribution of gases. Also safety whilst handling gases on your sites is of the utmost importance. Total Gas Management will guarantee that your in house standards on safety, work place and the environment will be reached. We can advise and train your employees on the safe handling of gases.

**Advantages**

- Total Gas Management will be set up completely according to your wishes
- Uninterrupted gas supply is guaranteed
- Specifically tailored to your situation
- Time and cost savings
- Focus on your core activity
- Safety and quality ensured

Total Gas Management improves your quality and safety through the dedicated effort of specially trained people. This will take your care for gases out of your hands and will ensure a cost effective operation. How Total Gas Management will be implemented depends completely on your situation and your wishes. Are you interested? We will then compose together with you the best possible package for a continuous gas supply.

### Total Gas Management package

- Checking and replenishment of bulk and cylinder gas stores, ensuring an uninterrupted gas supply.
- Performing all logistical operation surrounding your gas consumption. This means among others taking care of the internal distribution of gas cylinders, timely exchange and ordering of all gas cylinders and ordering bulk deliveries.
- Periodical checks for leaks and proper operation and maintenance of connections, gas distribution cabinets and other equipment, ensuring a maximum safety.
- Monthly reports on absolute and relative gas consumption. Also you will receive information on delivery performance of Linde Gas Benelux.
- The Cylinder Trace System is an in house developed software program, which can register your cylinder flows and localise cylinder balances.
- This system will allow Linde Gas Benelux to advise you pro-actively on optimisation of your gas consumption and stock keeping. This will increase efficiency and reduce cost. You will never pay too much!
- Guaranteed observance of safety, work place and environmental legislation.
- Answering of all your questions linked with gases and all related items.
- Complete availability, also outside of normal office hours and during weekends.
- Whenever necessary Linde Gas Benelux can be on site 24/7 with all relevant equipment
- Periodical training of your personnel in respect with safe working with gases.
- One single recognisable and physically present focal point for all gas related affairs.

As the largest industrial gas supplier in the world, we of course work with strictest confidentiality procedures.
